TRAINER ANSWER KEY

Lab 6 – Spot the Errors

Expected identification of the five deliberately flawed AI statements.

1. Incorrect date

AI says 15 March 2026. Source says 15 May 2026. This is a direct factual error and should be corrected before the output is used.

2. Misinterpretation

The source says the ■95 lakh addition relates to rent paid to a related party being considered excessive compared with market rent. It does not say that rent paid to a related party is automatically disallowed.

3. Unsupported conclusion

The source does not state that the officer lacked jurisdiction or that the demand is likely to be quashed. This is a legal conclusion not supported by the supplied source.

4. Missing information / potentially misleading statement

The source states a demand of ■46.8 lakh including interest. The AI statement calls it the “total tax demand” without preserving the important qualification that it includes interest. Participants should flag this as a loss of context / missing qualification.

5. Potential hallucination

No Orion Warehousing (2021) ruling appears in the supplied source. The reference cannot be treated as verified. Participants should flag it as a potential hallucination and verify any real citation independently.

Model improved prompt

“Use only the source text provided. Verify every date, amount and factual statement against the source. Preserve important qualifications such as ‘including interest.’ Do not infer legal conclusions, jurisdiction or likely outcomes. Do not add case names, citations or authorities that are not in the source. If information is not stated, write [NOT STATED]. Present a table with Source Fact, AI Statement, Verification Status and Notes.”

Trainer emphasis

The purpose is not to teach participants that AI is always wrong. It is to teach them that AI output must be treated as a draft that requires source-based verification—especially for dates, amounts, legal interpretation, conclusions and citations.
